Potatoe Protection Fabric

Toptex Potatoe Protection Fabric offers optimum protection of your potatoes from rain, snow and frost. Reduced mass and starch losses will increase your yields, and reduced soil contamination will ease up industrial processing.

The benefits at a glance

- Protection against rain and snow
- Effective frost protection without annoying frequent covering/de-covering
- Reduced soil contamination with low efforts
- Reduced mass and starch losses

= Higher yield!

Toptex is a nonwoven made from 100% UV stabilized polypropylene - strong, durable and allowing respiration.

**5 years life-time** under normal conditions. The life-time can be increased when Toptex is protected from UV light when not in use.

Forms of Supply

- Width: 9,80 m 9,80 m
- Roll width: 2,45 m 2,45 m
- Length: 25 lfm 12,5 m
- Roll weight: 27 kg 35 kg

materials that make a difference
Potatoe Protection Fabric

Possible pit configurations

- **Water shedding** - (protects potatoes from precipitation)
- **Respirating** - (no condensation, potatoes will dry up)
- **Temperature balancing** - (protects from early frost*, avoids excessive heating-up)

* Only in the case of long-lasting, strong frost (below -5°C) we recommend the additional covering with a plastic film.

**Easy handling**

Annoying frequent covering and de-covering as with water and airtight plastic films is not necessary!
